

THE PERRIS STUDENT PROGRAM (PSP)

Our program is unlike any other student program. We incorporate indoor skydiving utilizing our onsite wind tunnel. The wind tunnel is an invaluable learning tool that allows you to improve body flight and practice what you need to pass your proceeding levels without the pressure of jumping out of a plane. One minute of tunnel time equates to one skydive, and our student program includes 20 minutes of tunnel time! Our single instructor progression results in more jumps with a certified AFF instructor. This means more coaching and experience being shared with you throughout your progression. Our progression also strongly emphasizes canopy drills and progression starting from PSP Level 1. Being able to fly your canopy with confidence and do so safely is of utmost importance. Our main objective is to produce high-quality, well-rounded students, and our PSP program is uniquely designed to do just that.

In general, we advise our students to plan on spending at least two weeks with us to obtain their 'A' license. This time frame accounts for being here all day, every day. This is a safe average, but please understand that students progress through the program at different rates, and we cannot guarantee that you will complete the student program in this time frame. Weather, instructor availability, personal stamina, and personal progression are a few of the factors that influence the total time it will take to obtain your 'A' license.

Below is a brief description of what you would learn on each PSP level and the price per level. All levels include their own canopy progression as well:
